Miracle Apata — Backend Engineer

GitHub • LinkedIn • Email • Portfolio • +234 816 852 4477
Akure, Nigeria (WAT, UTC+1) · Remote · Open to remote roles

Summary

Backend engineer building secure, real-time APIs in **Python (FastAPI, Django) and TypeScript (Node.js, NestJS)** for mobile and web products in commerce, logistics, estate management, and safety. Experienced with RBAC and JWT/OAuth2 auth, WebSocket and push infrastructure, multi-tenant design, and Docker/CI pipelines. Early member of a young software company, where I owned all backend work before also leading mobile, so I design APIs with the client developer in mind.

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, SQL, C# · *Familiar:* C, C++, OCaml
- **Frameworks:** FastAPI, Django, Flask, Node.js, Express, NestJS, ASP.NET
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **Architecture:** RESTful APIs, microservices, WebSockets, serverless, multi-tenant systems
- **Auth & Security:** JWT, OAuth2, session auth, RBAC
- **DevOps:** Docker, Docker Compose, GitHub Actions, AWS (CodePipeline), Nginx, Linux, PM2
- **Testing:** Pytest, Jest, Postman, unit and integration testing

Experience

All engagements are remote and held concurrently.

Backend Engineer · Jodna Technologies · Port Harcourt, Nigeria (Remote) · *Dec 2024 – Present*

- Early member of a young software company delivering client projects; initially owned all backend work.
- Led backend architecture for mobile and web platforms on **FastAPI and Node.js**: authentication, RBAC, analytics.
- Built a notification microservice (FastAPI + Socket.IO) with device-token FCM support; integrated cloud storage and push notifications.
- Mentored junior backend engineers and enforced coding standards.

Freelance Software Developer · Remote · *2020 – Present*

- Delivered backend APIs and automation scripts for clients in Nigeria and internationally.

Backend Engineer · Sofgo · Ondo, Nigeria (Remote) · *Sep 2023 – Sep 2024*

- Built RESTful APIs (Django, Node.js) for logistics and e-commerce platforms, with authentication, payment gateways, and deployment pipelines, working closely with mobile engineers.

Projects

piXeval rebuild — engine & API (DINATEN) *(in progress, sole developer) — Python, FastAPI, WebSockets, pytest*

- Designed a Qt-free service layer (database, codecs, exams, formula evaluation without `eval`, reports, exports) and a FastAPI HTTP/WebSocket backend with background jobs, typed results, progress events, and mirrored error codes.
- Documented the design, conventions, and phased plan; 79 test files; rewrote legacy sheet-generation scripts supplied by the product owner into a modular pipeline.

Multi-Tenant Mobile API Backend (Jodna) — *FastAPI, MongoDB, Redis, JWT, PM2*

- Scalable role-based APIs with real-time notifications and analytics tracking for a mobile commerce app.

Tywn backend — *Node.js, TypeScript, PostgreSQL, JWT*

- Live location logging, alert dispatch, and personnel monitoring for security agents; private fleet tracking and subscriptions.

PriceGrid *(personal)* — *FastAPI, SQLModel, PostgreSQL, Redis, Alembic, Docker, pytest*

- Price-intelligence API for informal markets: append-only price records, cross-market comparison, Redis-cached hot reads invalidated on write.
- Spike detection as a decoupled Redis pub/sub pipeline; JWT and RBAC; unit and integration tests; one-command Docker Compose setup.

Education, Recognition & Certifications

- **B.Eng. Electrical & Electronics Engineering**, Federal University of Technology, Akure — 2024
- **Outstanding Technical Contribution**, TrackWeNg (now Tywn) — Certificate of Recognition, Dec 2025
- **Python Developer Certification**, freeCodeCamp — Jul 2026 (verify)
- **Languages:** English (fluent, C1), Spanish (conversational, B1)
