Miracle Apata – Python Developer

GitHub • LinkedIn • Email

Summary

Creative and reliable Python developer with a strong background in backend systems, automation tools, API development, and desktop applications using PySide6. Proven experience delivering scalable applications, writing clean code, and solving real-world problems for clients. Comfortable working independently or in a team, with a strong focus on quality and performance.

Technical Skills

- **Languages:** Python, JavaScript, SQL
- **Frameworks/Libraries:** FastAPI, Django, Flask, Pandas, NumPy, Requests, Pytest, PySide6
- **Tools:** Git, Docker, PostgreSQL, MySQL, Linux, GitHub Actions
- **Other:** REST API Design, Web Scraping, Automation, CLI Tools, Desktop GUI Development

Work Experience

Backend Engineer — Jodna Technologies
Port Harcourt, Nigeria · December 2024 – Present

- Led backend architecture for mobile and web platforms using **FastAPI**, designing scalable APIs for authentication, role-based access control, and analytics.
- Built a notification microservice on **FastAPI + Socket.IO** with device token-based FCM support.
- Mentored junior backend engineers and enforced best coding practices.

Backend Engineer (Contract) — ScanifyDev
NJ, USA · September 2024 – December 2024

- Built and deployed backend APIs using **Python (FastAPI)**, supporting blockchain-integrated smart deal approvals and financial workflows.
- Managed scalable database schemas and CI/CD pipelines.

Backend Engineer (Internship) — Sofgo
Ondo, Nigeria · September 2023 – September 2024

- Developed RESTful APIs using **Django** for logistics and e-commerce platforms.
- Implemented authentication systems and payment gateway integrations.

Desktop Software Engineer — DINATEN
Santa Cruz de Tenerife, Spain · August 2023 – Present

- Built and maintain **piXeval** and **pixEBAP**, two Python (PySide6) desktop apps for automated multiple-choice exam correction, used by universities and academies.
- Implemented OCR/OMR-based answer sheet scanning and grading using OpenCV2 and TensorFlow.

Freelance Python Developer
Remote · 2022 – Present

- Delivered backend APIs and automation scripts to clients across Nigeria and internationally.
- Built data processing tools for Excel/CSV-heavy workflows using Pandas.

Projects

Backend / API

Token Realty Exchange – Decentralized Real Estate Commodities Platform

Technologies: FastAPI, PostgreSQL, AWS
tokenrealty.exchange

- Built backend infrastructure tokenizing real estate equity into commodities, with multi-role authentication for brokers, sales managers, financial advisors, and licensees.
- Developed KYC/AML verification workflows, token creation APIs, and location-specific AVM valuation logic.

Multi-Tenant Mobile API Backend — Jodna Technologies

Technologies: FastAPI, MongoDB, Redis, JWT, PM2

- Architected scalable APIs supporting role-based access and real-time notifications for a mobile commerce app.
- Created a notification microservice using FastAPI + Socket.IO, with device token-based FCM support.

PriceGrid — Market Price Intelligence API *(solo project)*

Technologies: FastAPI, SQLModel, PostgreSQL, Redis, Alembic, Docker, pytest
github.com/prmpsmart/price-grid

- Solo-built backend that tracks prices of everyday goods across vendors and markets, detects price spikes in real time via a Redis pub/sub pipeline, and surfaces cross-market comparisons.
- Shipped as a self-contained, fully tested v1 (unit + integration tests) with one-command Docker Compose setup.

Desktop (PySide6)

piXeval & pixEBAP — DINATEN

Technologies: Python, PySide6, OpenCV2, TensorFlow

- Built and maintain two production desktop apps for automated multiple-choice exam correction, used by universities and academies across Spain.
- Implemented OCR/OMR-based answer sheet scanning and grading (up to 30 exams/minute), bulk import from Word/Excel/Moodle, and multilingual UI (Catalan, Spanish, English, Euskera, French).

SnapGrade *(solo project, in active development)*

Technologies: PySide6, OpenCV, pyzbar, qrcode, ReportLab, openpyxl
github.com/prmpsmart/snapgrade

- Solo-built desktop app for generating, scanning, and grading multiple-choice exam sheets via OMR, with no proprietary Scantron hardware required.
- Built and calibrated an OpenCV-based OMR grading engine (ink-fill-ratio bubble classification) plus Excel roster import/results export.

Freelance & Open Source

AudioWave — Audio waveform visualization & playback

Technologies: Python, PyQt/PySide6

- Built a Python Qt library to record, play, read & write audio wave data with waveform visualization UI.
- Supports live/recorded data, multi-channel, and GUI waveform rendering.

Analytics Dashboard (PySide6)

Technologies: Python, PySide6

- Ported a Figma-designed analytics dashboard to a desktop app using PySide6 widgets.
- Implemented UI components: buttons, cards, dialogs, filter panels.

Temp_dev_db — Dummy REST API of temporary databases

Technologies: Python, FastAPI, Docker

- Created a REST API server to generate time-limited databases for dev/testing.
- Built endpoints for CRUD operations, temporary DB lifetimes, and user management via API keys.

Qt-Material-Widgets — Qt styling toolkit

Technologies: Python, PySide6

- Developed a Python port of a Material Design widget set for Qt apps.
- Includes buttons, toggles, tabs, and progress bars compatible with Qt and PySide.

> **More public projects:** github.com/prmpsmart

Education

B.Eng. in Electrical & Electronics Engineering
Federal University of Technology, Akure — Graduated 2024

Languages

- English (Fluent, C1)
- Spanish (Conversational, B1)
