Miracle Apata – Backend Engineer

GitHub • LinkedIn • Email

Summary

Skilled backend engineer with expertise in Python and TypeScript, experienced in building secure, scalable, and high-performance APIs for web and mobile platforms. Proven success collaborating across teams, optimizing systems, and deploying production-grade backend solutions using modern architectures and DevOps tools.

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, SQL, C#
- **Frameworks:** FastAPI, Django, Flask, Node.js, Express, NestJS, ASP.NET
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- **DevOps & Tools:** Docker, GitHub Actions, AWS, Nginx, Linux, Git, PM2
- **Architecture:** RESTful APIs, Microservices, WebSockets, Serverless
- **Auth & Security:** JWT, OAuth2, Session Auth, RBAC
- **Testing:** Pytest, Jest, Postman, Unit & Integration Testing
- **CI/CD:** GitHub Actions, Docker Compose, AWS CodePipeline

Work Experience

Backend Engineer
Jodna Technologies — *Port Harcourt, Nigeria*
December 2024 – Present

- Led backend architecture for mobile and web platforms using FastAPI and Node.js.
- Integrated cloud storage, push notifications, and analytics.
- Mentored junior backend engineers and enforced best coding practices.

Backend Engineer (Contract)
ScanifyDev — *NJ, USA*
September 2024 – December 2024

- Built and deployed backend APIs using Python (FastAPI) and Node.js (Express).
- Collaborated on blockchain-integrated smart deal approvals and financial workflows.
- Managed scalable database schemas and CI/CD pipelines.

Backend Engineer (Internship)
Sofgo — *Ondo, Nigeria*
September 2023 – September 2024

- Developed RESTful APIs using Django and Node.js for logistics and e-commerce platforms.
- Implemented authentication systems, payment gateways, and deployment pipelines.
- Worked closely with mobile engineers to ensure seamless frontend-backend integration.

Projects

Token Realty Exchange – Decentralized Real Estate Commodities Platform
Tech: FastAPI, PostgreSQL, TypeScript, LoopBack, MongoDB, AWS
https://tokenrealty.exchange

- Built backend infrastructure for a decentralized platform enabling tokenization of real estate equity into commodities.
- Designed and implemented multi-role authentication for brokers, sales managers, financial advisors, and licensees.
- Developed KYC/AML verification workflows, token creation APIs, and location-specific AVM valuation logic.
- Engineered secure, compliant smart contract integrations with DAO oversight and Series LLC asset holding models.
- Ensured tokens are treated as commodities backed by deeds and mortgage filings—not securities—through strict business logic and validation pipelines.

Gamaliel Consult – Corporate Advisory & Mentorship Hub
Tech: Node.js, MongoDB, Express, TypeScript
https://www.gamalielconsult.com

- Built REST APIs powering a mentorship and business consultancy platform.
- Integrated appointment scheduling and mentor matching features.
- Developed custom role access for mentors, mentees, and admins.

Tywn (formerly TrackWeNg) – Backend Platform
Tech: Node.js, TypeScript, PostgreSQL, JWT
https://home.twynapp.org/

- Developed backend APIs for a real-time tracking and alert system targeting individuals and security companies.
- Implemented live location logging, alert dispatch system, and personnel monitoring for security agents.
- Built features to support private fleet tracking, user subscriptions, and communication workflows.

PDF Webpage – Academic Document Sharing Platform
Tech: Node.js, TypeScript, MongoDB
https://pdf-webpage-ashy.vercel.app

- Engineered backend for an academic material-sharing platform for students and tutors.
- Enabled document upload, PDF categorization by course, level, and semester.
- Implemented email capture and notification system for new materials and updates.

Multi-Tenant Mobile API Backend – Jodna Technologies
Tech: FastAPI, MongoDB, Redis, JWT, PM2

- Architected scalable APIs supporting role-based access and real-time notifications for a mobile commerce app.
- Created a notification microservice using FastAPI + Socket.io.

- Integrated user analytics tracking and device token-based FCM support.

Personal Projects

PriceGrid – Market Price Intelligence API
Tech: FastAPI, PostgreSQL, SQLModel, Redis, Alembic, Docker, pytest, JWT
https://github.com/prmpsmart/price-grid

- Solo-built backend that tracks prices of everyday goods across vendors and markets, detects price spikes in real time, and surfaces cross-market comparisons — built to address price opacity in informal/local markets.
- Designed the schema and repository layer (goods, vendors, markets, append-only price records, alerts), using **SQLModel** to unify ORM tables and API response schemas, with Alembic-managed migrations.
- Built price submission, history, cross-market comparison, and time-windowed trend endpoints, with **Redis** caching the highest-traffic read (`/prices/current`) and invalidating on write.
- Implemented **spike detection** as a decoupled Redis pub/sub pipeline — the price service publishes spike events and a separate consumer persists alerts, so new delivery channels (email, webhook) can be added without touching the publisher.
- Enforced **role-based access** (viewer/vendor/admin) with JWT auth and bcrypt password hashing, and covered the system with unit tests (business logic) and integration tests (auth → submit → alert flow).
- Shipped as a self-contained, fully tested v1 — one-command setup via Docker Compose.

Certifications

- **Python Developer Certification** — freeCodeCamp, July 2026 — verify

Education

B.Eng. in Electrical & Electronics Engineering
Federal University of Technology, Akure — Graduated 2024

Languages

- English (Fluent, C1)
- Spanish (Conversational, B1)
